Company Profile

CO2 Servicios Forestales de Chiapas (CO₂ SFC) develops comprehensive nature-based environmental projects and supports companies in integrating environmental, social and governance (ESG) criteria into their management and operations. Through solutions that link corporate sustainability with ecosystem conservation and restoration, we help organizations meet their environmental responsibilities and strengthen their capacity to respond to the new challenges of the business environment. We promote collaboration between companies, governments and communities to create joint solutions, build strategic partnerships and move toward more sustainable development models, in line with Sustainable Development Goal 17: Partnerships for the Goals.

Areas of activity

CO2 SFC works in the following areas, based on the services and projects the company has delivered:

- Environmental advisory and compliance.
- Carbon footprint measurement and management.
- Environmental certification.
- Nature-based solutions.
- Training and workshops.
- Company–community partnerships.
- Social impact measurement and evaluation.

HISTORY AND INSTITUTIONAL DEVELOPMENT

Since its founding in 2016, CO2 SFC has focused its operations on ecosystem conservation and the development of environmental projects, building the experience and capabilities to meet its clients' environmental, forestry and sustainability needs. Over time, the company has strengthened its lines of work and expanded its scope in response to project needs, organizational requirements and the environmental challenges around it.

This growth is reflected in broader lines of work and stronger technical capabilities, through specialized services in legal and environmental management, sustainability training and education, and corporate environmental assessments and audits, as well as the development and management of projects aimed at generating high-quality carbon credits.

CO2 SFC's development reflects a vision of integrating every dimension of environmental management, from technical and regulatory requirements to conservation, restoration and sustainability actions. From this perspective, the company brings together technical knowledge, field experience and team coordination to address the objectives of each project comprehensively.

Today, CO2 SFC focuses its capabilities on developing solutions tailored to the characteristics and needs of each organization, promoting management that links compliance with applicable obligations to the identification of improvement opportunities and the generation of verifiable environmental results.

Vision: To be the trusted partner of companies and investors who make sustainability a real advantage, and a benchmark in Mexico for environmental projects built on certainty and free of greenwashing, developed in partnership with governments and communities so that economic growth and conservation move forward together.

Mission: To support companies in meeting their environmental, social and governance (ESG) responsibilities with nature-based solutions that deliver measurable, traceable and verifiable results. Every project we drive contributes to ecosystem conservation, the social development of communities and the creation of sustainable value in the regions where we operate.

Scope of work

Environmental management and compliance; environmental impact and risk assessment; environmental audits and legal-environmental feasibility studies; design and implementation of sustainability strategies; nature-based solutions; ecosystem conservation and restoration; carbon footprint measurement and management; training in sustainability, Mexican financial and sustainability reporting standards (NIF and NIS) and circular economy; and strengthening the environmental and social performance of organizations.

Our approach

We support companies in integrating ESG criteria through environmental management, the strengthening of social well-being and development, and governance practices that promote transparency, regulatory compliance and the creation of sustainable value.

A SOUND MANAGEMENT PHILOSOPHY GROUNDED IN OUR CODE OF ETHICS

It is the foundation for how we plan, implement and verify environmental improvements. It prioritizes support for highly marginalized communities, so that every investment delivers real benefits where they are needed most.

Certainty: results backed by evidence and recognized methodologies.

Traceability: every contribution is linked to a project, a community and a verifiable result.

Zero greenwashing: we make no environmental claims we cannot prove.

AWARDS AND RECOGNITION

2025 Nature Conservation Award (Reconocimiento a la Conservación de la Naturaleza).

Granted by CONANP and SEMARNAT for the commitment and leadership of CO2 Servicios Forestales de Chiapas in protecting priority ecosystems and promoting nature-based solutions in Natural Protected Areas (ANP).

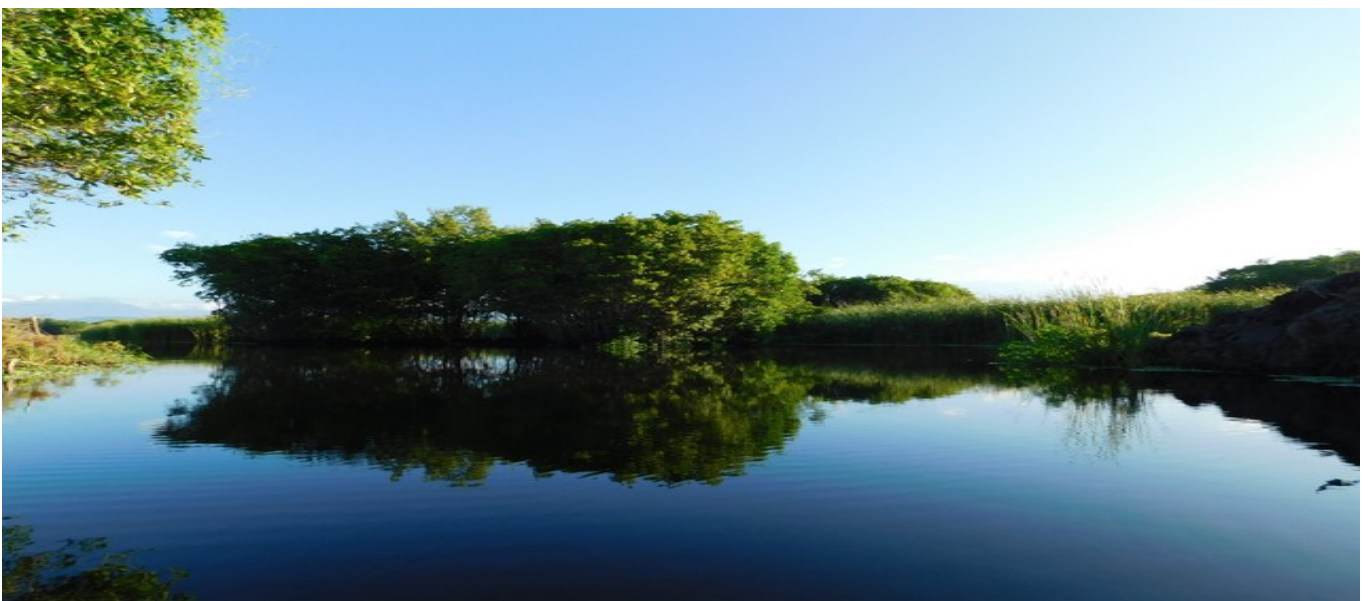

Medio Ambiente
Secretaría de Medio Ambiente y Recursos Naturales

Environmental

Environmental advisory and compliance

We adapt to your needs so your company complies with current environmental regulations:

- Environmental Impact Statements and Assessments (MIA and EIA)
- Management Plans for Solid, Hazardous and Special Handling Waste
- Annual Operating Report (COA) and impact mitigation measures
- Environmental Best Practice Manuals
- Corporate environmental assessments and audits
- Legal and environmental feasibility studies
- Linking financial information with sustainability
- Circular economy strategies
- Specialized training and sustainability education

SPECIALIZED SERVICES

Social

Company–community partnerships

We design and support partnerships between your company and communities that drive local development and create shared social value.

Training and workshops

In-person or online programs that strengthen your employees' skills and professional development in environmental compliance, sustainability and ESG criteria.

Social impact measurement and evaluation

We measure and evaluate the social impact of your projects and investments with clear indicators, so you can demonstrate real results to partners, investors and communities.

Governance

Policies, indicators and reporting

We develop governance policies, indicators and best practices so your company discloses reliable information to partners, investors and authorities.

Integration with the Sustainable Development Goals

We align your strategic plan with the specific targets of the 2030 Agenda to strengthen your commitment to clients, employees, partners and stakeholders.

Our training programs are officially registered with Mexico's Ministry of Labor (STPS).
